

Teagasc Johnstown Castle
Teagasc/ABP Dairy Beef Research Programme

Update: 06-12-2018

Animal Performance:

Older cattle

- 23 heifers were killed on the 26th November. These averaged 253 kg carcass weight with a 49.3% KO, conformation score of O=/O+ and 3= fat score.
- 22 heifers remain on the farm. These were weighed on the 6th December and averaged 473 kg, and have an ADG of 1.31 kg/day for their second winter period. These will be killed early January.
- The steers were weighed on the 6th Dec and fluke dosed. They averaged 542 kg.
- The steer diet has been amended to 2 kg concentrate with 28 kg silage.

Calves

- The calves will be weighed and dosed for fluke in the next 10 days.
- The calf diet has been amended to 12 kg silage (fresh weight) and 2 kg concentrate.
