

## White clover in grazing systems

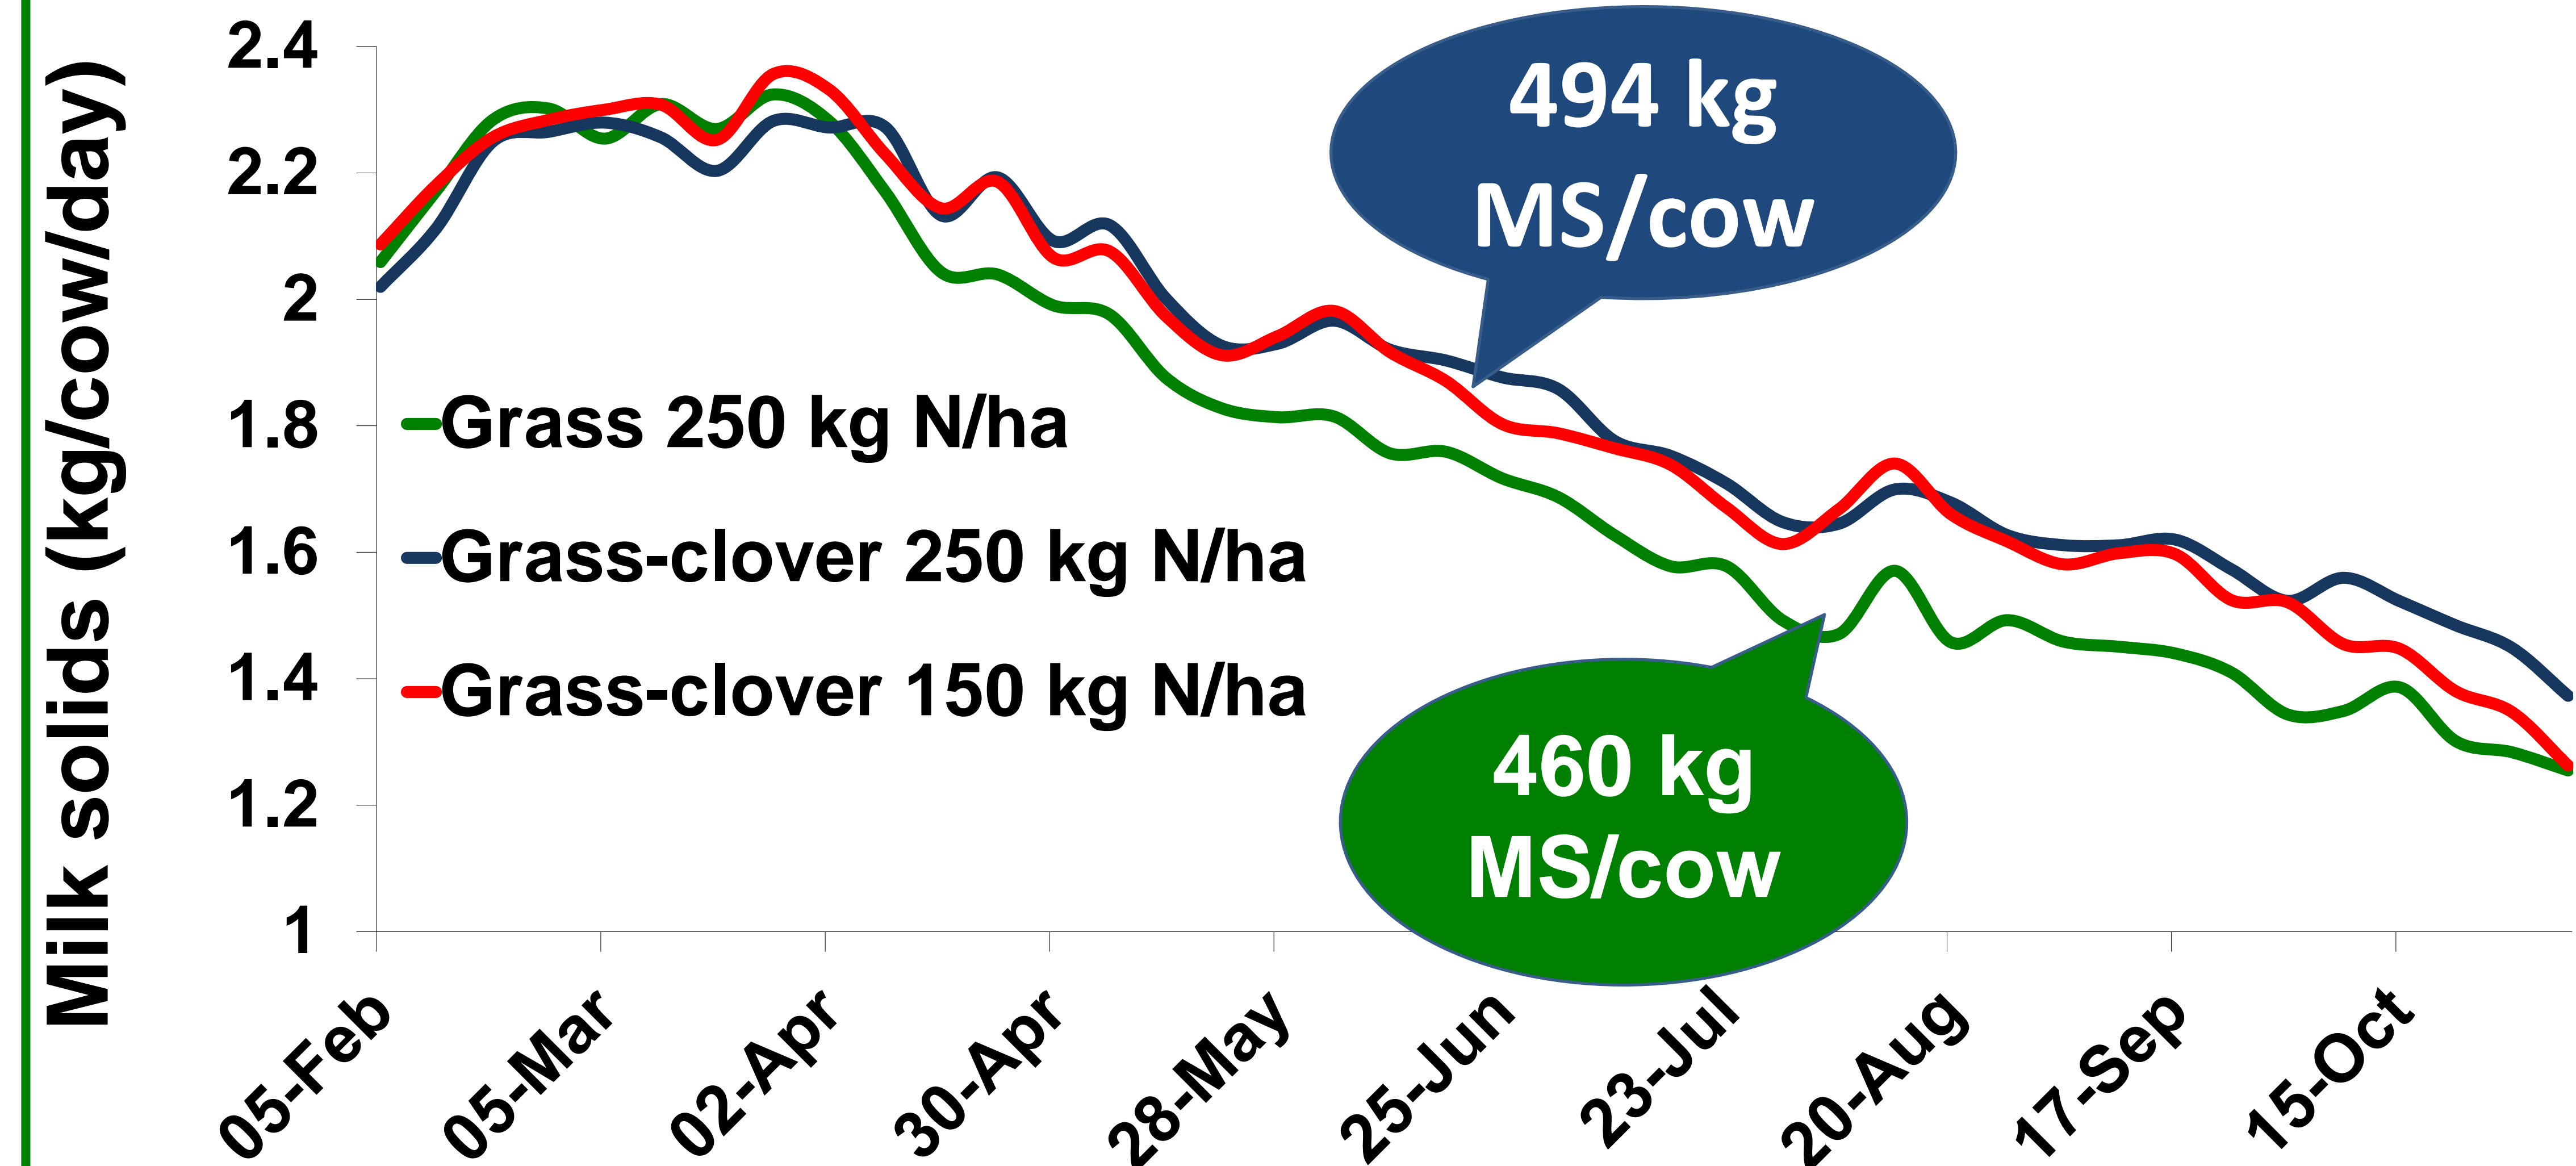

- Can withstand frequent tight grazing
- Fixes 150 to 250 kg N/ha/year
- High feed value

## Grazing Management

- Graze tight first and last rotation – 3.5 cm
- Mid-season
  - 18- 21 day rotation
  - 4 cm post-grazing height
  - 1300 – 1500 kg DM/ha pre-grazing yield

## Milk solids production - grass only and grass-clover swards (2013 – 2016) (2.74 cows/ha)

## Take home messages

- Including clover - + 34 kg MS/cow
- Tight grazing to maintain clover content
- Reduce N fertiliser on grass-clover swards
