

EXTENSION OF AUTHORISATION FOR MINOR USES (EAMU)

INSTRUCTIONS FOR USE

PPP: Proman (PCS No. 04450)

CROPS: *Ornamentals (outdoor) and Forest Nursery*

For this EAMU the following crop definitions apply:

*Forest nursery is considered as outside cultivation only.

This approval provides for the use of the product **Proman (PCS No. 04450)** in respect of, the crops and situations as listed above, which are extra to those specified on the product label.

The conditions of application outlined below are statutory. They must be complied with when availing of this extension for minor uses.

The instructions provided in this extension for minor uses must be used in conjunction with information provided on the approved product label.

Failure to abide by the conditions of approval specified below or on the product label may constitute a breach of the product approval.

Reference Date: 19.04.18. [Includes latest changes. This version should be used until updated]

Product name: Proman
Active Substance: Metobromuron
Formulation: 500 g/L (Suspension Concentrate.)
Authorisation Holder: Belchim Crop Protection NV
Marketing Company: Belchim Crop Protection Ltd
PCS No: 04450
User type/Function: Professional Use Only / herbicide.

Application:

<i>Crops:</i>	<i>Maximum Individual Dose:</i>	<i>Max No of applications:</i>	<i>Maximum total dose:</i>	<i>Harvest Interval:</i>	<i>Target:</i>
Forest nursery	2 L/ha	-	4 L/ha	N/A	Broad leaved weeds
Outdoor Ornamentals	2 L/ha	-	4 L/ha	N/A	Broad leaved weeds

There is limited evidence of crop safety and/or product efficacy available for this extension of authorisation for minor uses and the commercial risk of using this product on the crops/situations listed in this document is borne entirely by the grower.

Other specific restrictions:

- (1) To avoid risks to human health & the environment comply with the terms of this approval in conjunction with the directions for use on the product label.
- (2) For any individual crop the maximum total dose refers to the total dose of any product containing the same active ingredient(s).
- (3) Forest nursery and Ornamental (outdoor): Tractor mounted sprayer/ Knapsack/hand held sprayers only.
- (4) Do not apply more than 4 L/ha of Proman to the same area of land per annum.
- (5) After application do not enter treated areas until the treated area is completely dry.
- (6) This approval extends to professional use only.
- (7) For operator protection refer to the product label in conjunction with these instructions.
- (8) For environmental information refer to the product label in conjunction with these restrictions.
- (9) Adverse effects: Approval holders must immediately submit any new information on the potentially dangerous effects of a product or residues of an active substance contained in a product, on human or animal health, or the environment.

Advisory information:

This approval relates to use of “Proman” as a horticultural herbicide for use on the named crops and situations listed above.

Proman is a herbicide with pre-emergence activity.

Resistance Management:

Metobromuron belongs to the chemical family of ureas and is classified as an inhibitor of photosynthesis. Spraying the same field repeatedly, with products containing active substances from the same chemical family, or having the same mode of action can lead to the development of resistance.

To reduce the risk, it is recommended to alternate or to tank mix products containing active substances with complementary activity but from different chemical groups or having different modes of action, not only within one growing season but also throughout the crop rotation.

Strains of some annual grasses (e.g. black-grass, wild oats, and Italian rye-grass) have developed resistance to herbicides which may lead to poor control. A strategy for preventing and managing such resistance should be adopted. Guidelines have been produced by the *Weed Resistance Action Group* and copies are available from the HGCA, CPA, your distributor, crop adviser or product manufacturer

IMPORTANT PLEASE NOTE:

Prior to the use of this product, growers should take advice from their crop advisors particularly in relation to the use of this product within an integrated crop management system of production.

There is limited evidence of crop safety and/or product efficacy available for this extension of authorisation for minor uses and the commercial risk of using this product on the crops/situations listed in this document is borne entirely by the grower.
