

Farmers Have Hearts

‘Engaging farmers in health’

Diana van Doorn

Teagasc Walsh Fellow

National Centre for Men’s Health IT Carlow

Why farmers health?

Key factors underpinning farmers' health

- Socio-economic status
- Lower educational attainment
- Rural living conditions
- Social exclusion
- Gender
- 'Hard to reach' group

Smyth et al., 2012; CSO, 2012, Welch, 2000, Cleary et al., 2012; Walsh, 2010; National Rural Health Alliance, 2011.

Aims and objectives

To examine the impact of a lifestyle change intervention targeted at Irish male farmers on:

- (i) Follow-up use of GP services after being advised (60%);
- (ii) Understanding of mechanisms of cardiovascular health behaviour change among farmers;
- (iii) Reduced risk factors for CVD.

Methodology

- (i) Cardiovascular health checks at marts & co-ops at baseline and Week 52;
- (ii) Lifestyle change intervention (health coach by phone and/or M-health by text messages);
- (iii) Survey research at baseline / Week 52 (face-to-face) and Week 26 (phone).

Baseline: data collection

Baseline data collection:

- May 2018 – April 2019
- 12 Counties
- 16 Glanbia co-ops / 29 days
- 16 Marts / 30 days

1005 eligible farmers / 868 study participants.

Response rate

Study 86.4%

Interventions 73.5%

Progress to date

- Baseline completed (n=868);
 - Results published by April 2020
- Week 26 survey completed;
- M-health intervention completed;
- Health coach ongoing until March '20;
- Week 52 health checks ongoing until April '20.
