

Rural Isolation - Other houses within 2km of each home.

No. Houses within 2km of every home

Here we show the number of houses within 2km of every household in the country. We used the OSI National Map residences layer to calculate the number of residences within a 2km radius of each residence (we used a 10% sample to speed up the process and then multiplied the answers by 10).

We wanted to highlight rural isolation, rather the urban concentration - so areas of the country where on average each house has fewer than 20 neighbours within the 2km radius are shown in Deep Brown.
