#### **A.** Critical Issues

- 1. Maintain grass quality.
- 2. Reduce pre-grazing yield to below 1400kg DM / ha.
- 3. Reach target residual of 4cm

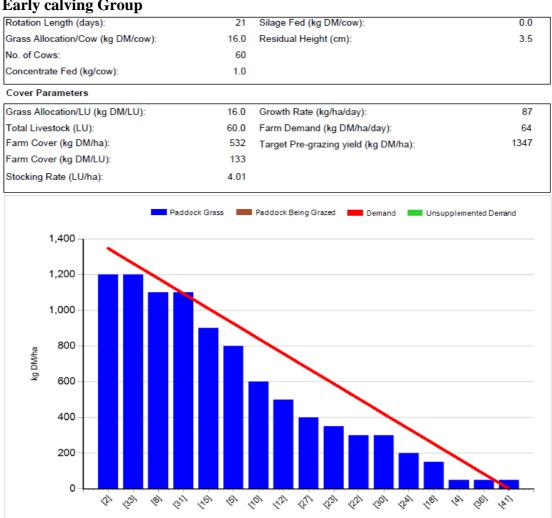

### **B.** Whole farm situation

- 1. Soil temperature today is 11.6°C.
- 2. Total rainfall over the past seven days was 14mm.
- 3. Average growth was 86kgDM/ha/day, (18% DM).

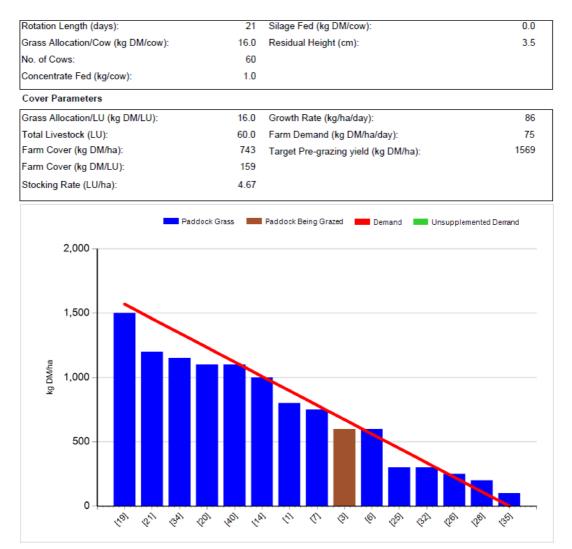

### C. 2013 Calving date trial

- The herd is split into two separate calving dates •
- Early calving group mean calving date is the  $20^{\text{th}}$  of Feb. •
- Late calving group mean calving date is the 10<sup>th</sup> of March. •
- Stocking rate is 2.9 cows per ha for both groups and fertiliser input will be • constant (250Kg N / ha).
- Within each group there are equal numbers of Friesian and crossbred cows •

#### **Early calving Group**

- 1. Farm cover is 532 kg DM / ha (133 kg DM / cow) and pre-grazing cover is 1200 kg DM / ha.
- 2. 3 ha have been skipped over for silage, these paddocks have a cover of 1200-1600kg DM / ha. The paddocks were chosen based on grass quality rather than strictly on cover. These paddocks will be cut at covers of 2000-2500kg DM / ha.
- 3. Grazing conditions have improved greatly but some of the wetter paddocks are still too wet to graze.
- 4. There are 94% submitted in four weeks of breeding.

#### Late Calving Group

- 1. Farm cover is 743 kg DM / ha (160 kg DM / cow) and pre-grazing cover is 1500 kg DM / ha.
- 2. Have skipped 6ha for silage this week to increase demand to 75kg DM / ha / day.
- 3. Submitted 66% in two weeks of breeding.

# C. Critical short term actions :

- Skip 25% of area for silage
- Skip paddocks above 1500kg DM / ha
- Spread 30 units of Sul-CAN after grazing

## **D.** Bulk tank details :

Milk yield 23.1kg, Fat 4.25%, Protein 3.44% (1.78kg MS) SCC 150,000.
