- Mastitis - 16% of cows treated in 1 week
- Heat Detection- Pre breeding heat detection commenced and heats recorded

Current Situation

- 95% of the herd calved
- 16% cows in TMR group treated for mastitis over the last week- significant effect on milk yield. Lower incidence in groups grazing by day.
- Farm is now closed for grazing. Highest remaining cover is 850kgDM per ha. Farm has a closing cover of 479kg/ha.
- Herd has switched to 100% indoor TMR. Details of the diet listed below. Concentrate ingredients are included as a coarse blend in the wagon mix. 1kg of 18% nut fed in the parlour.
- Feeding flat rate to a yield of 28 litres on a UFL basis. Offering 90% of full allowance this week as cows adjust to diet.
