

Johnstown Castle Winter Milk Herd- Weekly Management Notes

16/05/16

- We've had an explosion of growth in the past week to ten days, the heavy rainfall early last week coupled with high temperatures and nitrogen led to ideal growing conditions. We baled some surplus paddocks yesterday & have skipped a couple more for baling later this week if conditions allow (Paddock 35.1 to come out of wedge) Rainfall of 24.8mm & a soil temperature of 14.2 °C for the past week. Ground conditions improved quickly after the heavy rainfall & we were able to switch back to 24hr allocations by Thursday of last week.
- We're just finished the first three weeks of breeding & we had hoped to have a higher percentage of cows submitted at this stage (87% versus our target of 95%), hopefully we'll pick up a few more in the next couple of days, as were just the bare 21 days breeding as yet.
- If conditions are good, we hope to cut some 1st cut pit silage next week. We had approx. 20% closed with the cows by early April (should be at least 30%) & this has bulked up well in the last 10 days, we also have some replacement area which had not been grazed due to the wet spring & this will need to be cut. With the Autumn herd we have to target quality & let the quantity come when it does.

Cover Parameters

Grass Allocation/LU (kg DM/LU):	19.0	Growth Rate:	122
Total Livestock (LU):	65.0	Farm Demand (kg DM/ha/day):	92
Farm Cover (kg DM/ha):	1010	Target Pre-grazing yield (kg DM/ha):	1450
Farm Cover (kg DM/LU):	209	Days Ahead:	11
Stocking Rate (LU/ha):	4.84	LW/ha (Liveweight/ha):
